Subject: Miller Salvage Information

---Seeping into creek---Dan Bergett (OEPA) and myself had walked the creek and Dan collected seep samples to run field tests on them for ammonia I believe in mid April

---Nearest Resident --- there is a trailer house directly across the street...I've seen smoke from the chimney and heard a TV but never actually saw people there...it is ~150 feet away from the pile. The next nearest residents to the pile would be ~500 feet in either direction along Lapperrel road.

---Disposal--- Has only been going to Chillicothe and Huntington the entire project.

---Estimate size of pile -- I paced the length (~500 ft) and width(~250 ft) and guessed an average of 25 feet to account for ground slope.... This gives an estimated volume of 115,740 cubic yards. I cannot convert to weight as I do not know the density of the material. According to Paul (Miller Salvage, Fred's son-in-law) they had estimated about 60,000 tons were left when they moved the pile. The surveyor's said they may be able to get me a rough dimension of the pile on Monday (unofficial) once they download their data so I can have a better number then.

---Distance of Hatchery from the pile -- Driving distance along the road is 2 miles from the pile to the Kincaid Hatchery (1.7 miles from the pile to the spring). I stopped at the hatchery to see if they had a better idea of river distance,, but the director was out and may call me on Monday with a better number.

--Updated Disposal Tables---are attached

Polrep information -- In June they continued disposal with 1 truck, 3 loads a day (2 to Chillicothe, 1 to Huntington). Survey work occurred on June 28 and 29. The results of the survey should be available in 2 weeks (according to the surveyors).

Pond Level is at 4.0 to 4.25 feet...the same level it was at when the mass dewatering was discontinued on May 25, 2007.

Total START cost to date is ~\$85,000
